

Clean Drinking Water & access to sanitation are some of the simplest things that we can take for granted but in some rural areas, these are some of the hardest resources to attain.

DELIVERING ACCESS TO SAFE DRINKING WATER

A Refreshing Future

We have installed community level water treatment systems at various locations in different villages, Schools, PHC's that is now providing safe drinking water to over 10000 beneficiaries.

“Wells are the main source of drinking water for the local community here, the water is very dirty and unhygienic. Dead birds and animals are often found floating on the surface of the water but we are left with no choice but to drink that water as there is no other alternative” said village resident Gangia Bai

Globally, waterborne illnesses are a leading cause of death for children under five, killing nearly 1,000 children every day. Lack of sufficient volume of safe water and transmission of waterborne diseases endangers the lives of people living in rural communities. Same condition is observed in many of the remote areas where we are working, We took the initiative to provide clean water and sanitation in community we work in, including the most vulnerable populations in the hardest-to-reach places.

Few months back, the selected communities faces acute shortage and contaminated water. Residents of these villages, expressed their disappointment over the condition of the drinking water available.

Towards Cleaner Water

People in these villages, battling blatant inequalities to climb out of poverty. All they need is clean water but having a glimpse of well's water would cause nothing but sorrow.

According to Ranu Patel, her family has benefited highly from community water filter project at village, She said:“My Family forced to drink water from old wells in the village. The well water was barely suitable for drinking purpose because it was so dirty but currently most of the problems associated with lack of adequate safe drinking water are solved. She assures, All members of my family can access clean drinking water at anytime within reasonable distance from my home. We are very happy for getting access to sufficient clean water.
